Re: TTS Scientific Congress Awards

Dear colleagues,

Dr. Poramed Winichakoon is a clinical fellowship trainee in the Transplant Infectious Diseases Program at the University Health Network, University of Toronto. His two-year training includes clinical duties and research and will finish on July 31, 2024. Dr. Winichakoon has provided excellent care for his patients in the inpatient and outpatient settings. He is also actively involved in two ongoing research projects on **late-onset cytomegalovirus infection following kidney transplantation** and **comparison of the outcomes of *Pneumocystis pneumonia* in organ transplant recipients and other immunocompromised patients**. He has considerably helped our program as a senior fellow and he has been a role model for junior trainees. I strongly support Dr. Winichakoon's TTS Scientific Congress Awards application with The Transplantation Society.

Please do not hesitate to contact me with any questions or concerns.

Sincerely,

S. Hosseini MD, MSc, MPH
Associate Professor of Medicine
Transplant-Oncology Infectious Diseases Program, Fellowship Director
Division of Infectious Diseases, Fellowship Director
Department of Medicine, University of Toronto
University Health Network, Ajmera Transplant Centre
