Re: Amanda Motomochi

To Whom It May Concern,

I am writing to express my full enthusiasm and endorsement of Dr. Amanda Motomochi's research presentation titled "A report of intravenous immune globulin therapy to decrease angiotensin II type 1 receptor antibodies after pediatric liver transplant" for the 12th Congress of the International Pediatric Transplant Association conference.

As Dr. Motomochi's program director, I have had the opportunity to work with her on multiple projects. Our department benefits greatly from the pursuit of academic interest by our faculty, and one of our primary goals is to increase contributions to the scientific community in the field of pediatric anesthesia.

During her anesthesia residency and fellowship Dr. Motomochi has shown an interest in transplant patient care and outcomes. She is very excited at the prospect of a novel treatment in the treatment of a post-transplant complication. Her presentation is the first part of a possible case series and publication for our institution.

In accordance with the ACGME's added emphasis placed on developing academic pediatric anesthesiologists, we feel that the support of Dr. Motomochi's research is an amazing and important stepping stone. She is on her way in being a promising young investigator for our specialty. We are fully committed to ensuring the success of our learner.

As the program director of our fellowship, it is with great pleasure that I offer my full support and mentorship.

Sincerely,

Adolfo Gonzalez, M.D.
Program Director
Division of Pediatric Anesthesiology
University of Texas Southwestern Medical Center
Children's Health of Texas
